

# **Bridgend's Urban Trees**

- an amazing resource benefiting us all

Trees are essential to life. In urban areas they also provide important services: they help to alleviate flooding, they provide health benefits by absorbing pollutants, and they support wildlife. We want to see more trees in urban areas. During 2014-15 Bridgend County Borough carried out an i-Tree Eco study to value their worth.

Not only do trees make Bridgend's towns more attractive, they also:

#### Reduce flood risk

124 million litres of rainfall intercepted per year.

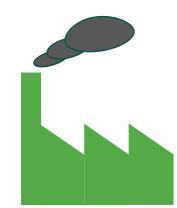

### **Equivalent to:**

Pencoed or Pyle's public swimming pools being filled

360 times

This stops the rain from entering the drainage system, saving £164,000 in sewerage charges.

#### Clean the air we breathe

61 tonnes

of air pollution removed per year

saving the NHS

£326,000

(by reducing asthma and heart disease)

#### Help challenge climat e change

**2,080 tonnes** 

of carbon removed from the atmosphere per year – worth £461,400

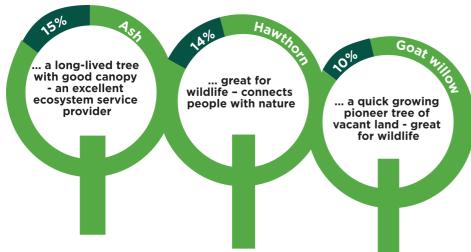

53,500 tonnes

of carbon stored over the life of Brigend's trees - worth **£12 million** 

The ecosystem services provided by Bridgend's trees are collectively valued at

£950,000 per year

## Sustaining and growing Bridgend's urban tree population

We need greater diversity of trees to counter the threat of pests and diseases as only 10 species make up 76% of Bridgend's trees. Ash is one of those large long-lived species that benefit society most, but Chalara dieback is currently endangering 15% of the urban tree population.

Large and leafy trees such as **OAK**, **SYCAMORE** and **ASH** offer higher levels of ecosystem benefits

It would cost **£686 million** to replace all Bridgend's trees should they be lost

The i-Tree Eco study highlights the real value of Bridgend's trees to society. As with any asset, urban tree populations require suitable resourcing to enable sustainable management, protection and enhancement.
